1 FAQs - System

1.1 How do I display my own logo?

To set up your own logo go to the Setup menu and select System Settings.

A logo can be added to the web site and there's another option to make the logo come out on the PDFs - although note that it will not appear with a "Standard - no front sheet" pdf format (as selected in **Template parameters - report tab** ('Report tab' in the on-line documentation)).

1.2 Do I need to change my firewall settings?

No.

All communications between the device and the server are initiated by the device, so there is no requirement to open up firewalls for external access by the magic5 server.
